The awaited core of the Angénieux High-End Full-Frame Solution

OPTIMO PRIME SERIES

with IOP

iRIS OVAL

coming soon

3 Blades

Stand out with an original look, such as iris with 3 blades. This IOP element provides a mimic of the front anamorphic lenses look.

Stand out with an original look, such as iris with 3 blades. This IOP element provides a mimic of the front anamorphic lenses look. This you will generate a post-ITF additional change inside the lens, so you will have the same effect as the front anamorphic lenses. The triangular effect appears only from 12.5. At 12.5 and up aperture, the look remains perfectly identical to stand out.

9 Blades

already integrated to your Prime

As original equipment, our Optimo Prime Lenses are equipped with properly balanced nine blades iris. An exceptionally round diaphragm designed by Angénieux Optics and Engineer expertise.

Paired with the excellent image resolution of our Optimo Prime lenses, the 9 blades iris will guarantee a symmetrical bokeh look from the center of the image up to the edges and the corners. The ability to capture such luminous bokeh over the entire scene will allow you to achieve consistency over the whole range of Optimo Prime series, no matter the focal length.

for the Classic Angénieux LOOK

Some horizontal flares, which are typical from the anamorphic lenses, appear. For instance, such as the ability to obtain effects that make the glimmer more attractive. A uniform blue light line is generated for appearing and authentic images.

REAR Elements

IOP Tooling set

Vintage

out of stocks

The IOP tooling set has been specifically designed by Angénieux to provide deep interoperability of all IOP elements. This operation should be done in a clean environment and will require a limited amount of time (around 15 minutes) if done by a trained technician at your local Angénieux or Angénieux Service Center.

This high quality set will allow you to change the iris subassembly, internal IOP elements or rear filter.

Easy to remove and process in a matter of a few seconds, our internally processed rear filter will provide every vintage image look to your image to help you create all kind of old fashioned atmospheres.

Our Vintage filters glass with through a very specific and controlled process of polishing and lapping technology in order to reproduce the mighty Angénieux 250/250 HR zoom look. The new Vintage filter will help you to recreate the cinematic mood by achieving soft and magical dreamy effect.

IOP Integrated Optical Palette by Angénieux

Functionalities of High-end cine lenses

- Constant volume
- Internal Lenses
- MFD (near focus)
- 100% transmission (no light loss)
- Internal asymmetry apertures that range
- Round bokeh across image plane
- Interchangeable front/rear ring
- Front diameter system
- Mini data (code II)
- All 12 blades share the same great positions
- Available in PL mount
- Support Full Frame & Super8

The palette includes customizable elements:

- Inter-changeable iris: 3, 9 iris blade (9 as standard), oval
- Internal glass elements: clear, uncoated, net, glimmer, blue streak...
- Screw-in Rear filter: custom design rear filter with 40.5mm (S35) & 46mm (FF) thread Integrated Optical Palette (IOP)
